

El Índice de Masa Corporal (IMC) define la relación entre el peso y la estatura de una persona y depende de la proporción de la grasa corporal.

$$\frac{\text{Índice}}{\text{(IMC)}} = \frac{60 \text{ (kg)}}{1,62^2 \text{ (m)}} = \frac{60}{2,62} = 22,90$$

## Tabla IMC para NIÑAS de 5 a 18 años (OMS)
